HIV1/2 Rapid Test

Wondfo One Step HIV1/2 Whole Blood/Serum/Plasma Test is a rapid immunochromatographic direct binding test for the qualitative detection of HIV1/2 antibodies in human whole blood, serum or plasma as an aid in the diagnosis of HIV infection.

Specimen
Whole Blood/Serum/Plasma

Detection target
HIV 1/2 antibodies

Storage temperature
4~30°C

Shelf-life
24 months
HIV infection is often diagnosed through rapid diagnostic tests (RDTs), which detect the presence or absence of HIV antibodies.

There were approximately 37.7 million people living with HIV at the end of 2020 with 1.7 million people becoming newly infected with HIV in 2021 globally. Sub-Saharan Africa is the most affected region, accounting for two-thirds of the global total of new HIV infections.

HIV infection is often diagnosed through rapid diagnostic tests (RDTs), which detect the presence or absence of HIV antibodies.
